Ceramic Tile Merceram

MEHRCERAM

Ceramic Tile Merceram

Types of tiles :

Porcelain tiles

- Made at high temperatures
- Very high solidity
- Very high strength and hardness

Cement tiles :

This type of tile is first poured into the mold and then dried naturally or with heat and the paint is added for painting in the early stages.

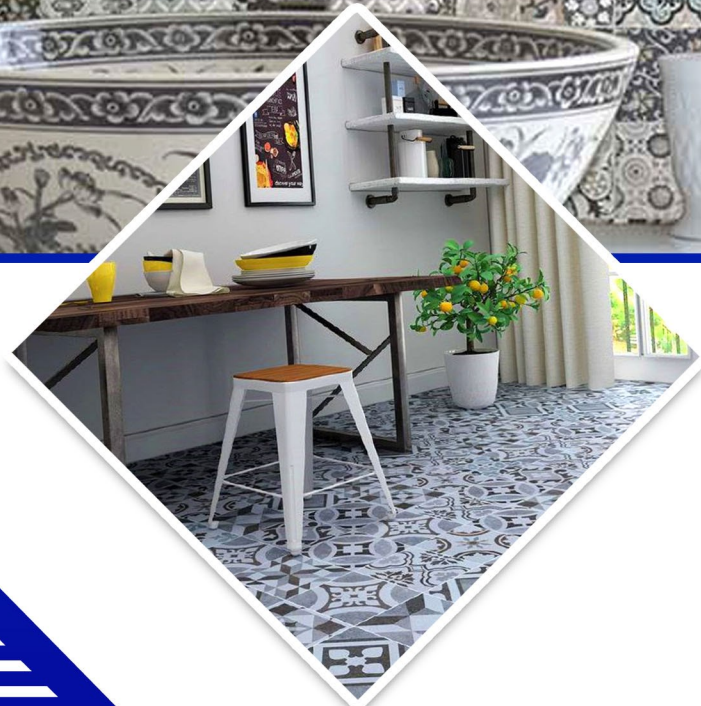

Mosaic tiles :

Mosaic tiles are made in two types of porcelain or ceramic and glazed and unglazed.

Pavement tiles :

These tiles look almost like bricks and are used for floors of buildings and patios and do not need to be sealed after installation.

Other types of tiles produced by MehrCeram Trading Company :

- Brick tiles
- Glazed tiles
- Mineral tiles
- Mexican tiles
- Ceramic tiles

Types of ceramics :

Porcelain Ceramic

As Porcelain is a very high-quality type of ceramic, it can be produced in large sizes. It is very solid, impenetrable with tiny and smooth grains.

Specifications :

- Waterproof
- High chemical resistance
- Anti-stain specifications
- High abrasion resistance
- Hard and anti-scratch surface
- Huge diversity
- Fire resistance

Ceramic glass :

Glass ceramics are produced in the solidifying process of an object and making it look like glass. Ceramics produced by this method have very low porosity and are resistant to staining. This type of ceramic is very durable and can be used as a suitable substitute for granite and marble. Glass ceramics are produced by firing very tiny minerals such as clay and silica at very high temperatures, in which tiny particles are melted to form a glass surface.

Quartz ceramics :

Quartz ceramics are produced by collecting stones and connecting them together. If marble chips are used in the manufacturing process of this type of product, it is called engineered marble. This product is used for indoor floors and walls, and quartz ceramics are mostly used in kitchen cabinet walls and counter tops.

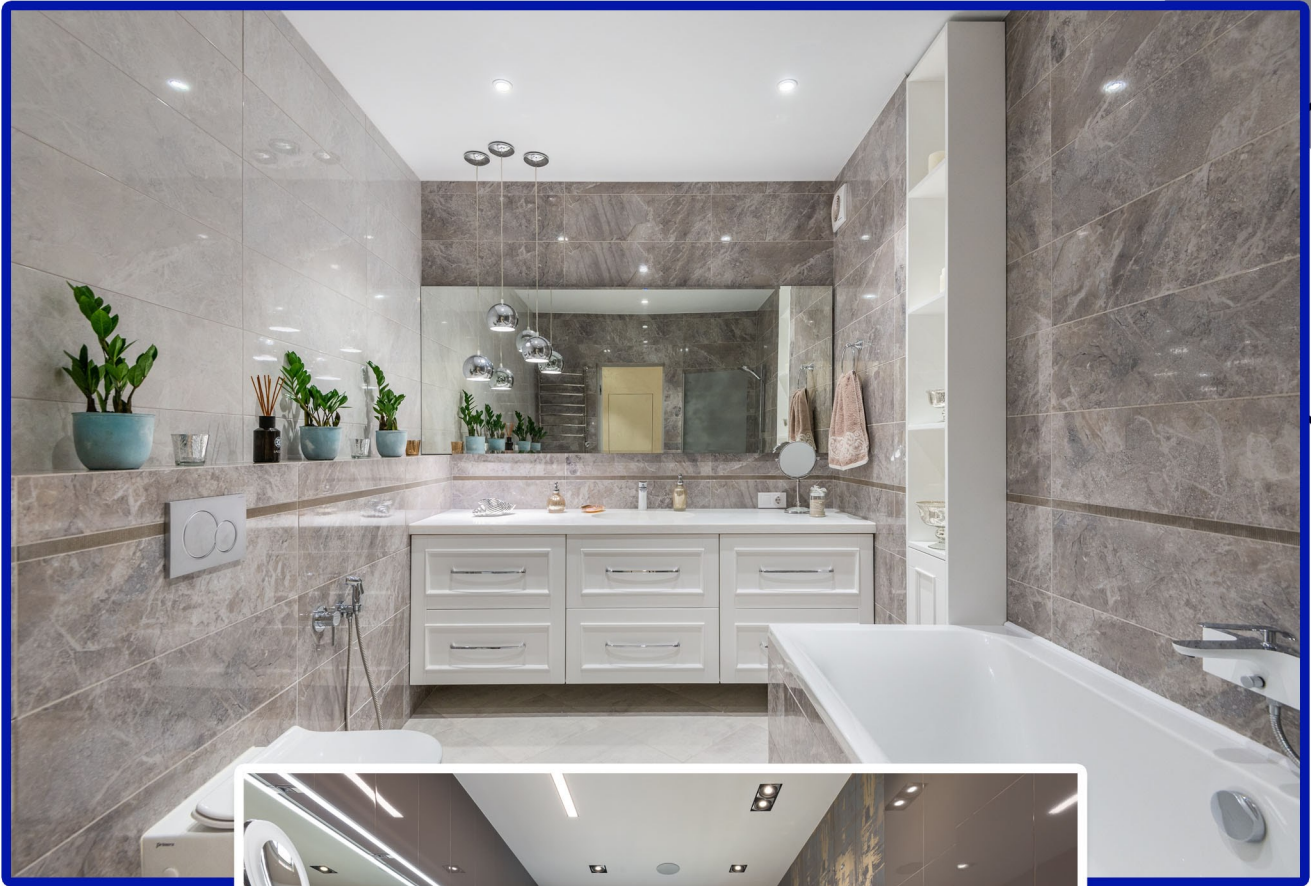

Quarry ceramics :

This type of ceramic is produced by extruding clay or shale. Traditional quarry mosaics are produced unglazed and are red and gray. Unglazed quarry mosaic has a surface with high slip resistance and prevents slipping. This type of product is used because of its high resistance for the floor of indoor and outdoor spaces of the building

Dimensions of all types of ceramic tiles produced in Mehrceram

40*100	120*240
40*120	20*100
40*40	20*120
80*40	25*25
50*50	30*30
120*60	50*30
60*60	30*60
80*80	30*90
90*180	32*32
	33*33
